Silt curtains are structures suspended in the water column to control water-borne sediment. They can be either permeable or impervious and are also known as turbidity curtains, flotation curtains or silt screens.

BENEFITS OF SILT CURTAINS

- Controls suspended silt and sediment migration, allowing settling to occur in waterways
- Four design options to suit different water conditions, from calm waters to harsh marine environments
- Durable, oil-resistant closed-cell foam flotation
- Reinforced webbing for added strength and support
- UV-stabilised materials for long-term durability
- Skirt depths available up to 20m
- Easy installation with handles and hardware supplied
- Customisable designs to suit project requirements, water conditions, visibility and regulatory standards
- Optional accessories, including external floats, anchor sets and specialist geotextiles
- Complete design, supply and installation support from our team of experts
